# User Manual

To install the system the latest version of unity must be downloaded. The link to find the most current version of unity can be found here:

https://unity3d.com/get-unity/download

Once Unity is properly installed on your machine. Open UnityHub, this will show you a list of current projects currently installed on the machine, if it knows where they are located.

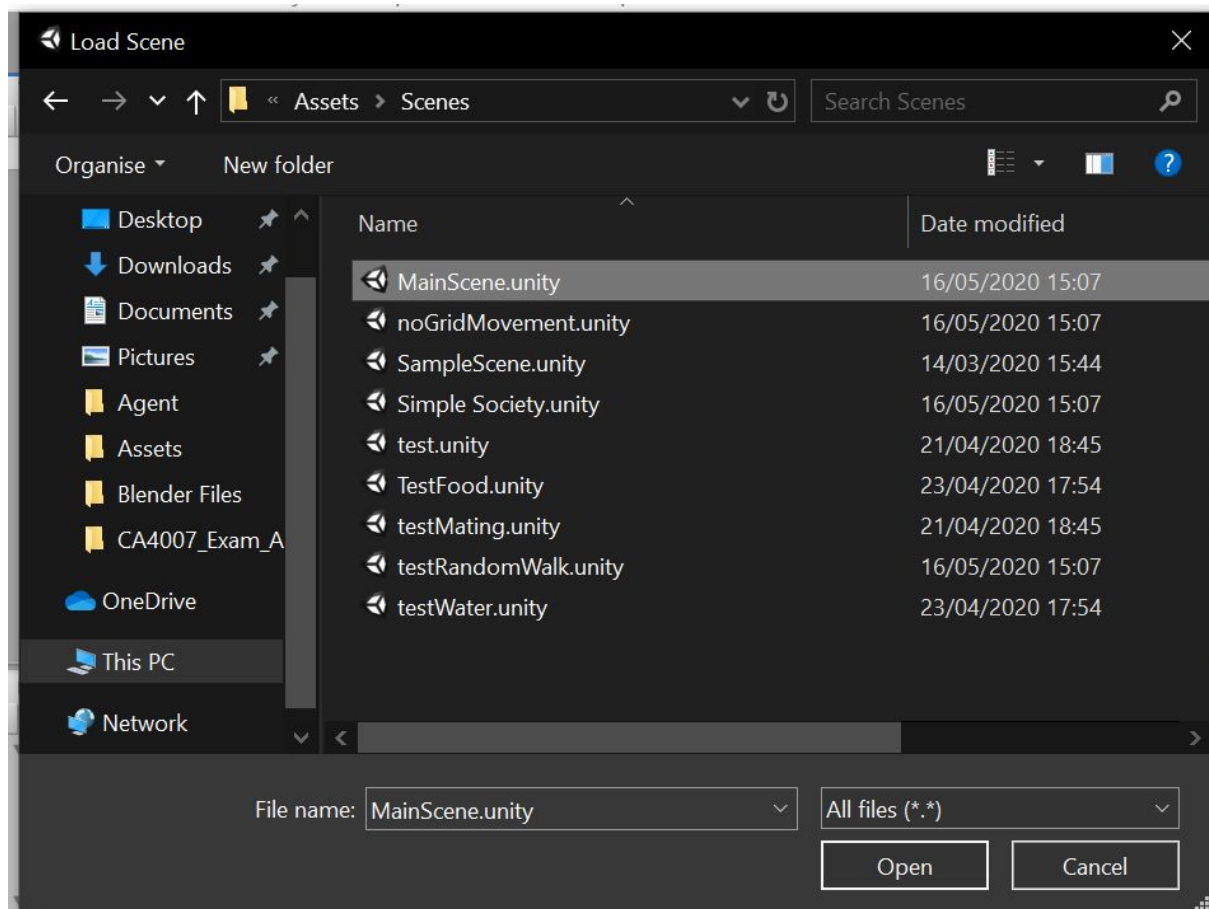

To add a new project click the Add button on the top right hand corner of the screen, this will open the file explorer. Navigate to wherever you have downloaded the project and navigate to this directory:

C:\Users\YourFilePathToDownloadedProject\Fourth                     Year Project\Fourth-Year-Project\src

Once you have navigated here you should see a folder called 'A Simple Society' Add that folder to unity Hub and start that project.Once the unity program opens youll see an empty unity scene.

To load the correct scene to begin the program, click file, open scene then move to the scenes folder in the assets directory and click "Main Scene"

To run the program simply press the Play button on the top of the screen.
